Company Name

City, Country

May 3, 2026

Dear Selection Team,

I am writing to express my interest in the position of **[Job Title]** at **[Company Name]**.

I am a Data Scientist with a PhD in Economics, Management and Statistics and a Master's in Big Data Analytics, specialised in NLP and Large Language Models. My background combines rigorous quantitative training with hands-on engineering experience, spanning academic research, applied AI development, and full-stack data product delivery.

Across research projects – GRINS, EUMEPLAT (H2020), and Just Smart – I designed and maintained reusable Python pipelines for the full NLP lifecycle: data extraction, text classification, clustering, sentiment analysis, and model fine-tuning. I worked with spaCy, HuggingFace Transformers, and scikit-learn on large unstructured corpora (social media, judicial documents, European media), always with a focus on modular, testable, and reproducible code. I deployed applications using Docker, managed versioning with Git/GitHub, and delivered results in cross-functional teams alongside technical and non-technical stakeholders.

On the generative AI side, I have experience deploying and integrating open-source LLMs (LLaMA, Mistral, Gemma, Deepseek) via Ollama with Web-UI interfaces into production analytical workflows. I also developed WhatDSApp, a full-stack interactive web application on the AMELIA cloud platform, combining stochastic sustainability models with a policy-facing interface – bringing together data science, software engineering, and domain expertise in a single product.

My research background in quantitative economics and public finance adds a further layer: I can work at the intersection of data science and complex socioeconomic problems, translating analytical results into actionable outputs for diverse audiences.

I am available for an interview to discuss how my profile fits your team's needs.

Kind regards,

Samantha Ajovalasit
